

Solara Logistics posted annual revenue of \$4.9 billion, with a 10% year-over-year increase driven by stronger demand in last-mile delivery services. E-commerce growth and strategic warehousing expansions fueled the results.

The company improved its operating margin to 17% through cost optimization and digitization efforts. Investments in route planning AI helped cut fuel costs and improve delivery efficiency by 14%.

Total net income rose to \$410 million, resulting in an EPS of \$2.85. Solara declared a final dividend of \$0.50 and plans to expand its fleet with electric vehicles next year.

Major infrastructure projects were completed in Europe and Southeast Asia, including three new logistics hubs. These are expected to boost regional revenue contributions by 20% in 2025.

Solara launched a workforce development initiative focused on upskilling frontline employees. Over 3,000 workers completed certifications in logistics technology and customer engagement.

A proprietary logistics app was released in Q2, offering real-time tracking and digital proof-of-delivery features. This has enhanced customer satisfaction and reduced support queries by 25%.
